

Regular and Irregular Polygons — Cheat Sheet

11+ Maths Guide · Year 5-6 · Keep this by your desk

REGULAR AND IRREGULAR POLYGONS

1. Regular = ALL sides equal AND all angles equal.
2. Fail either test → irregular.
3. Only regular quadrilateral: the square.
4. Regular polygon examples: equilateral triangle, square, regular pentagon/hexagon.

Example: rhombus → equal sides, unequal angles → irregular.
