MEASUREMENT PROBLEM SOLVING

1. Read twice; underline numbers, units, the question.
2. Convert to matching units first.
3. One line per step, units on every number.
4. Check the final unit matches what was asked.

Example: $2 \times 750 \text{ ml} \times 5 \text{ days} = 7500 \text{ ml} = 7.5 \text{ l}$
