

Best Value — Cheat Sheet

11+ Maths Guide · Year 5-6 · Keep this by your desk

BEST VALUE

1. Divide each price by its quantity → unit price.
2. Lower unit price = better value.
3. Or scale both to the same quantity.
4. State the verdict in words.

Example: 4 for £2.40 (60p) vs 6 for £3.30 (55p) → the 6-pack.
