

Bar Charts — Cheat Sheet

11+ Maths Guide · Year 5-6 · Keep this by your desk

BAR CHARTS

1. Read the axis scale before anything else.
2. Bar height → across to the axis = the value.
3. 'How many more' → subtract the two bars.
4. Total → add all the bars.

Example: bars 12, 8, 6, 10 → total 36; apples beat grapes by 6.
