

Habitats and Adaptation — Cheat Sheet

11+ Maths Guide · Year 5-6 · Keep this by your desk

HABITATS AND ADAPTATION

1. A habitat provides food, water, shelter and space.
2. Adaptations are features that aid survival there.
3. Physical (fur, spines) AND behavioural (hibernating, migrating).
4. Better-adapted individuals survive and reproduce — over time, evolution.

Example: cactus → spines (less water lost) + thick stem (stores water).
